

And finally...

We hope you enjoy these newsletter thingamys, they are here to encourage, wind-up and hopefully make the reader either amused or furious, depending on how seriously they take it all.

This all started as a staff magazine, and it seems the loglists have invaded it. No problem there, we aim to cater for all listeners to the sound broadcasting medium. The articles aimed at upsetting the more ridiculous and egotistical dxers have served their purpose well, and only the 'good ole boys' appear to have sent in logs this time. even so, five pages out of sixteen is a lot, and from next issue QSO-only and SSB operators are not to be included. The FM lists may only appear if space allows. Tim take note!

It would be nice for the stations mentioned to send in stuff about themselves, We want to do a calendar for next year, with important stations' dates included in it, and photos etc. Any ideas or details? Send them in.

We are looking for 12 photos, [not of the Ross-Bloody-Revenge please!] Of station parties, rigs, studios, or other related stuff. Maybe a picture of Eric Gotts or Theo Brower- for the dartboard project, which we have reincarnated from Radio Weird, or a popular view from the roof of a towerblock somewhere... the list is endless, and the imaginations of the readers more so.

The next issue should be out on August 20th 1999, and we'll try and make some space for more photos. Sorry about there not being any in this issue, but there's been a lot to talk about!

BY THE WAY... Three women are sitting at a bar, and the first one says "I'm so loose my husband can stick his hand up me."
The second one says "That's nothing, I'm so loose, my husband can stick his head up me!"
The third one was laughing so hard she slipped down the stool.

STOP PRESS

RADIO.

1 RADIO ARGUS LONDON'S 1593KHZ SERVICE ON SUNDAYS HAS NOW MOVED TO 1125KHZ. 266M. 1593KHZ IS NOW ABANDONED. THE DUTCH-BAND SERVICE WILL ONLY BE ON 1620KHZ, AS THE RE-CONFIGURED AERIAL SYSTEM DOES NOT WORK TOO WELL ON 1650KHZ. THIS WILL ALSO HELP PREVENT POSSIBLE CLASHES OF PROGRAMMES, AS ANTARES WILL CONTINUE TO USE 1650 AS WELL AS 1611. os reports

2 RECORDING IS GOING AHEAD FOR THE START OF THE SHORTWAVE SERVICE, LIVE SERVICES SHOULD FOLLOW IN A FEW WEEKS. os reports

3 PIPELINE, ANNOUNCED AS PLANNED FOR 1188KHZ, 259M, IN THE LOGLISTS, HAS IN FACT BEEN HEARD FAINTLY, BY OSCAR, ON 1287KHZ, NEXT CHANNEL TO AN RSL! osca

4 LASER HOT HITS [C] MAY BORROW ARGUS'S OLD 1593 XTAL IF THE RNLI RSL GOES AHEAD ON 1575KHZ. os reports

DX ERS. THE LAST WORD [I HOPE]	15
And finally	16

Well, here we go again, with another load of stuff, thanks to Steve Dogbolter for digging out some more fonts. For now we are incorporating the Cornish 'Newsflash'. This news is now being sent to all former recipients of Newsflash, via the Cornish team. We've got a 16-pager for your edification, with a foreward by Oscar. Enjoy.

Oscar writes:

"A short comment from me about the concerns of Radio Waves from mobile phones being a possible cause of tumours and other health problems. Lets hope it turns out to be true! I know there are some people who need these things for essential contacts while on the move, but let's face it, most of the sad gits who spend ages posing with and gassing into these things are just doing so in an attempt to compensate for their inadequate personalities. It is a vain attempt to elevate their deflated sense of self-importance, when the reality is they are nothings or nobodies.

The world is overpopulated, we don't really like each other, we all just get under each others feet, and if some individuals have to bow out by having a seizure and dropping dead then people like that should be first in line. Eliminate the undesirable and improve the species, its a perfectly natural process.

I see also that the mobile phone companies' brilliant response to this is to suggest that you use a headset, and clip the phone on your belt. OH GREAT! Remove the source of that nasty micro-wave energy away from your head and relocate it... next to your genitals!!

Regards to all. Oscar"

BY THE WAY...

A woman runs out of her house one morning, and catches a strange little man at the bottom of her garden.

"You're a goblin." She says, "I caught you, and you owe me three wishes!"

"OK, you caught me fair and square, what's your first wish?" "I want a huge mansion to live in" she said. "Ok, you've got it, and your second?" "I want a Mercedes!"

"No problem, and your last wish?" "A million pounds!" she squeals.

"Its yours, but to make those wishes come true you have to have sex with me all night."

"Ok, if that's what it takes." she replies.

In the morning he wakes her up, and asks her how old she is..

"Fuck me!" he exclaims... "27, and you still believe in Goblins!"

RADIO ARGUS KERNOW. WHAT HAPPENED.

In May I visited the station in Cornwall, and came away with a great sense of disappointment.

The station had not made a broadcast since March, and that one had turned into a fight on the air.

The problems are complex, and seem to revolve around a lot of bickering and pettyness, much of which, it must be said comes from the station's boss, James Halstead.

The station has had all the help and assistance it could want over the past few years, and this has ranged from Ray Trevone allowing the use of his fishing boat to relay the Helston FM service onto MW, from offshore, in Mounts Bay. A farmer allowing them the use of his land near Wendron, for other MW relays, and the goodwill of the London station. They still have the FM rig I brought down in the early 90's, unless James really has smashed it to bits!

Bill Lyons, Lyn Alders and James Griggs, who had left the station in the late 80's to try for a 'legal' Radio Argus, in the Truro area, [which was to have been relayed across the county by the free service], had returned, thoroughly pissed off with the way the Radio 'Authority' works, and more than ever determined to fight for a change in the system, but James Halstead, who had virtually been on his own for years, following the tragedy in 1989, and the staff leaving, was in no mood to welcome them back, and I had to intercede a year or so ago, on their behalf. The first words the returning DJs said on the air, was an apology for trying for a licence, and a condemnation of their actions, and the actions of anyone else who does so. This was part of the deal, and they fulfilled it. [This has now been incorporated into all Argus rules, by the way.]

Bill got Ray to allow the use of his boat, while Lyn rounded up, and persuaded other ex DJs who had left after the 1989 tragedy to return, Ginny Wilson, Sid Jackall and Sue Pascoe were to swell the staff numbers still further.

All was looking rosy, which means something is going to go wrong where Argus is involved. This time the problems came from within.

James Halstead, presumably, felt left out of all the improvements, although he was always considered the boss. His antics recently have been getting worse, and his insults have led to Ray throwing the AM rig overboard, and Sue Pascoe resigning.

I arrived at the pub where the meeting was to take place, along with Vince Jefferson, of the now defunct Gloucester station.

As the other staff turned up, James arrived, and immediately the rows started.

Bill called for a vote on whether James should be sacked. Vince, Ginny and Myself voted no, but all the rest voted yes.

Bill then explained that James' latest foible was to charge DJs for the use of the FM rig, by the hour.

I pointed out that this was really my rig, that it had cost me £100, and I certainly hadn't let James have it if he was going to do this. Vince, who, like myself hadn't known of the charging, agreed, and pointed out that this was against the station rules in any event.

I then offered to bring down the 1593khz rig, once the London station had completed its move back to 1125, but James then insulted me, saying I was trying to throw rigs at the problem.

I asked what the real problem was, for James had certainly changed since I saw him last. He didn't respond, but Sue said that it was due to Jane Brown getting a job in Ireland, and leaving. While James denied this had anything to do with it, few of us believed him.

James also said that he had smashed up the FM rig I had brought down, and the station was dead. He didn't want to hear anymore about it, and if anyone tried to bring it back, and he got to hear about it, he would track it down and smash it up, or grass it up.

After that, several people got up and left.

The station now consists of Bill Lyons, Lyn Alders, Ginny Wilson and Ray Trevone. I have offered them spots on the ShortWave, once we start a regular service up, and we all intend to re-start the Cornish station, after the dust has settled a bit.

In the meantime James, of whom I once had the highest regard, [he, myself and Bill were after all on the original team], appears to be somewhat unbalanced. He was certainly drinking a lot, but didn't appear to get overly drunk. Jane's leaving may have pushed him over the edge, but I don't know, nor does anyone else.

Radio Argus Kernow will return, but not just yet. We feel it wiser to let things settle down a bit first.

Bert.

STATION FUNDING by Bill Lyons and Bert Bridges

In view of recent problems in Cornwall, perhaps now is a good time to look into how a free radio station is funded.

There are three main ways.

1. The DJs pay the manager for the use of the equipment etc. This can vary, from being a 'one-off' payment for the rig, repeated every time a new one is needed, to a regular system, whereby each DJ pays per show.

2. The manager buys the equipment, and nobody pays anyone.

3. The manager pays the DJs

There are advantages and disadvantages to each of the above. Here at Radio Argus, we employ the second way. The manager pays for the rigs, etc, and, while donated equipment is not turned away, it isn't asked for either. Engineering is either paid for in cash or in kind, for example, Radio Antares' engineer will be doing the tweaking etc. of the London stn's SW rigs, and in return they will be using the rigs as well. The same goes for stations who locate sites for us, their programmes being carried, while their sites are being used.

The First way, would seem to be a good one. If the staff are paying, then they will be putting everything into the effort, surely?

The problem with this system, is that some petty-minded staff will be watching the minutes of each show like hawks, and will demand 'fair airtime'. This can get bogged down in the amount of potential listeners at any hour of the day. If a raid occurs will the unplayed shows form 'credit' for when the station returns? If the power is different with a new rig shouldn't the fee change with the coverage area? If it's on FM, shouldn't there be different fees if it is or isn't in stereo? The list is endless.

Not only that, but the management and direction of the station suffer, and the sound of the station ends up a mish-mash and compromise, going nowhere.

In the end, the station dissolves into a lot of silly squabbles and damaged egos, with people not talking to each other, and slagging each other off.

The Third way is all well and good, and there are many loyal staff on many stations who turn up regularly, risking raids and so on, who do not get paid, but whose 'legal' contemporaries are raking in millions for producing the same end result - music on the radio. The former people, of course *deserve* to be paid, and if the money was there, *would* be paid, although other staff may see free radio as an ideal, or a fight, and would not want the money to start with. In our case, I try and organise piss-ups every payday, which, although far from ideal, hopefully shows the staff they are appreciated.

In Cornwall's case, the station ran the same way as all the other Argus stations, until recently. Nobody paid anybody, and everybody pulled together equally, with James as boss.

A small donation was paid to Ray, for the use of his boat, but after a month or so, he said he didn't want any more, unless he was actually raided, and if he could have a show, he wouldn't want any money then either. Quite why James Halstead should suddenly change to charging is a mystery, and it has wrecked the station.

If you, gentle reader, are considering setting up a station, consider carefully the way you do it. To ask for money means you are putting new staff on an equal or even higher level of authority than yourself, and they may have opposite ideas to you on the music and presentation of the station. The result at best will be a compromise nobody wants, at worst the station will not make it.

If you start paying staff, can you keep doing so? A few heavy bills can destroy the best laid plans, and a raid and/or fine could put you in the red. Then what do you do? Stop paying? This will in one way, show you who are doing it for love, and who is doing it for money, but you could end up losing all your staff.

The other way means you pay for everything. This isn't really as daunting as it seems. Second hand studio equipment, got from boot-fairs can sound just as good as brand new, and if you are raided, you haven't lost out so badly. The dti will take away a £200 NAD turntable, as easily as a £15 second-hand Garrard or BSR - they won't care - but you will...

The rig itself can be the most expensive item. Get friendly with other stations, and go along to their piss-ups. find out if their engineer can help you out - offer him a show, even if he doesn't play what you like, grin and bear it - he will build you a rig for either cost price, or nothing in return!

AMDS, INTERNET RADIO WITHOUT THE PHONE BILLS

by Dave Fuller

As you know, I've been down the pub over the last year or so, investigating the possibilities of broadcasting over the nerdnets.

[Hic!] Well I'm back, and I've brought your worst nightmare with me... No, not Claire-the internet... pause for sharp intake of breath... and Focus!

AMDS stands for Amplitude Modulation Digital Stereo, and will be brought to you by the Modem and N-Pegs, the nerd's pirate digital compression system.

Readers may be gobsmacked by the idea of modem noise on the MW band. I too, think this is the last bastion of easy, accessible free-to-air broadcasting, so after a few short tests, a place on Short Wave will be found.

The problem was one of having to constantly update our 'site', thus keeping the phone line open all of the broadcast time. The establishment would therefore have made loads of money, and now the Artist Protection rackets are getting in on the act too.

The team has carried out some low-powered tests and by the time this is printed a temporary site should be up and running: Saturday's RAM 220 will be in AMDS, on 1386 MW, and Sunday's will be a repeat in normal AM. The digital feed will then transfer to a SW frequency planned around 15MHz.

Two services are planned in AMDS, a real-time radio station - Sundays on SW running alongside the 1386 AM service - and a full web site down load service, which will not be interactive.

Persons remaining anonymous have suggested www bandwidth stealing. We looked at this, but the telecoms establishments would still ultimately win, so the idea was not taken up. [Thanks anyway, to the folks who supplied the info... keep on hacking!]

That's AMDS explained, now on to a different subject...

Radio Argus's 'Foreign Policy' is now well under way, and we sure are gonna teach them Turks a lesson. As long as the barbaric interference [on 1584] to Radio Argus listeners [on 1593] in the Bow and surrounding areas continue, the airwave war will go on. My apologies for supplying the wrong maps last month, I purchased them from the acting Tibetan Peoples Revolutionary Council under good faith, with a money back guarantee, and I did ask where the Bow Flyover was. Incidentally, they told me the map was hand-drawn just weeks before the structure was completed. My apologies also to the three American tourists who recently bought the 'Fuller Guide to Yugoslavian Pubs' 1966 edition. My mistake, lads, sorry!

The unfortunate incident regarding the Leytonstone Green Man block [demolished] is much regretted, but airwave wars are dirty business, and the 'Fuller Aerial' normally does no harm to a structure at all... One of the three 'Rock to Rock' blocks is still standing, after all! [The pulling down of the blocks opposite Leyton Orient, and the Hackney Marshes, and the boiler blowing up at Ward Point, Kennington, just yards from the famous Brittany Point -site of many Fuller aerial broadcasts- have ALL been COINCIDENTAL!] 225khz Test transmissions from the Long Wave site on the [now crumbling] M4 flyover have been postponed!

In closing, please pass my regards on to Felix Marston., and my apologies for his barge. It was used to shore up the [collapsing] Heathrow Express tunnel after Bridges' Long Wave earthspikes caused the cave-in! I had to scupper it to stop up leakages into the tunnel, something we have used with some success with the Jubilee Line extension, and a couple of old Russian Submarines...

Now, who's round is it...?

Editor's note... The earthspikes were bought cheaply from a reputable company, which has in the past supplied precision made pipes to various middle eastern states, and had to have a clearance sale a few years ago!

BY THE WAY... a man goes to his doctor, puzzled. He has been away in the army for the past two years, and has just arrived home to find his wife has recently had a baby.

'Ah,' says the doctor. 'That will be what we call a grudge baby.'

'What the hell's a grudge baby?' asks the soldier

'It's where somebody had it in for you,' replies the doctor.

FREQUENCY LISTS

THE USUAL RULES APPLY, NO SINPOS OR CONTACT ADDRESSES, JUST FREQUENCY, STN NAME, WHO HEARD IT, PROGRAMME CONTENT AND COUNTRY OF ORIGIN.

THE ONLY LICENSED SERVICES LISTED ARE THEIR HARMONICS, OR IF RELAYED BY A FREE SERVICE. PHONES AND BEACONS ARE ALSO LISTED, IF LOGGED.

ARGUSNEWS HAS ALWAYS PUBLISHED THIS LIST ON THE UNDERSTANDING THAT STATIONS MENTIONED IN IT HAVE BEEN CONTACTED BY THE LOGGER[S], INFORMING THEM THAT THEY WILL BE MENTIONED IN ARGUSNEWS.

We do not accept QSLs as evidence of anything, other than an ego-trip.

This issue, we have divided up the bands, to make things a bit tidier. [before anyone complains, 1611khz is in the MW list, because most domestic analogue and some digital radios can tune there - some can even do higher, but this is probably a bit too far!]

KHZ	STATION NAME	LOGGERS	COMMENTS	FROM

396	BBC RADIO 4 LW	TIBA	HARMONIC [2x198 KHZ]	GB

Frank [R.Delmare] tells me that he uses a kite aerial for LongWave, and the signal was heard over a huge area. The discovery of a possible site in North Kent, around the Sittingbourne area, means that this experiment could be replicated, by ourselves, using the Galaxy idea of a generator for power, and a helium filled weather balloon instead of a kite.

MEDIUM WAVE - 495 - 1611khz

Expansion of services in the Dutch band have no doubt, been in part due to the change of the Dutch Law, which effectively means the authorities there cannot touch a rig that is not actually transmitting. Nonetheless, it hasn't helped "ATLETICO RADIO", which has been raided recently. Bad luck, Atletico. Do you want us to put out some taped progs for you on 1620khz, from GB until you can get re-established?

This band is also seen as better than Tropical bands by some stations, who see two audiences. Those whose MW radios can tune up to the high 1600's on local ground-wave as well as distant listeners on the skip... Holland to Canada...! Well done Monte Carlo [and Greetings!]

Following an appeal by Tim Bass, [and comments aparently made on the internet by 'Rubber' Jonny, that we don't realise that there are other bands], we have decided, as a trial only, to add to our already extensive Long Wave to Short Wave lists, by including some FM.

OSCAR'S BIT

I'm back now after my trip to the Far East. Because of my travels I was unable to write any stuff for the last issue of Argusnews, but I would like to say thanks to all the people who have responded to my article in the issue before last. This time I'm just going to pick up my pen, jot down some sub-headings and let my thoughts ramble. Feel free to respond with your own input if you wish. Interesting material from you will be included in the next edition.

FREE RADIO - FREE EXPRESSION! ALTERNATIVE RADIO - ALTERNATIVE VIEWS AND CONCEPTS!

BRUNEI

Not too much to mention radio-wise from there, as such, except to mention that I was interested to note that in this small independant state on the island of Borneo, there is a permanent live broadcast of London's Capital FM. The sultan there, who is well known as one of the world's richest men of course, pays for a permanent ISDN feed from London, in order for the service to be re-broadcast there on 100.1mHz. Don't let this put you off though, this guy is well liked and respected by his people, and I found his country interesting and charming, having been there it is clear to me that democracy stinks, and benevolent dictatorships rule ok! I may go into this subject more in the next issue, or on Radio Antares, so listen out!!

EAST MALAYSIA

All radio stations and even the print media are firmly in the grip of a corrupt and distinctly dodgy government, and I have to say that being there makes you begin to think that maybe radio in the UK isn't so bad after all, but then you come to your senses and say: "Nooah, it's bad alright!" Don't know if you've heard, but a 'Mad Pig Disease' is spreading fast in Malaysia. It does cross over to humans and has already killed dozens of people, but this is believed to be via mosquitoes rather than eating infected pork. I survived though!

RADIO GALAXY INTERNATIONAL

I first became aware of this project when I heard a QSO between Station Sierra Sierra and a couple of Dutch stations, namely Alpha Lima and Voice of the Netherlands, on 48 metres. SSS operator, Paul Stewart, was announcing that some interesting broadcasts would be taking place, and indeed they did! This was back in mid May. Galaxy is in fact the combined efforts of 3 other stations, namely Blackbeard, SSS and also Mark Perry, who runs an FM station. All Galaxy broadcasts are made from vehicles in remote outdoor locations. This strategy has been adopted in response to the fact that when certain UK stations operate from their usual broadcast locations, the inhabitants of neighbouring dwellings become, shall we say... err... mystified... by the dulcet tones of some raving pirate radio operator emerging from every piece of apparatus in the building including the water taps and plug holes! Transmissions are live, with a mobile phone on site for listeners to respond. Their normal regular broadcasts take place on THURSDAY EVENINGS with inverters and a low power rig, and occasionally at weekends, higher powered broadcasts take place using a generator and the Blackbeard rig, which is well in excess of 100 watts! Frequencies can be anywhere on 76 or 48 metres.

I take my hat off to the Galaxy boys for getting off their rear ends and putting together a venture like this. they have had a phenomenal response so far, and look out for other station operators joining them on future transmissions. Bill Live wire and Chuckling Steve St.John being two likely candidates. Now that Galaxy are getting more accustomed to the practicalities of operating the station in this manner, as Paul Stewart was telling me they are, I look forward to some developments in the programme content of the station. My suggestion would be to find a way of putting the live phone calls directly to air in order to do a phone-in discussion show. Music shows would be a let-down and a waste on a station of this nature, and anyway, music radio is for people with no brains [...!! speechless ed]

THE WIZARD'S MAGIC SPELL

One positive aspect to come from doing good free radio is that it inspires other operators to start up, or to keep going, or as in this case, to come back. Having heard the Galaxy thing, our friend The Wizard has decided to return to the airwaves with his station The Magic Spell, after a period of about 9 months of inactivity. We hope the sorcery won't fade away again, because we need stations like this to keep plugging away. a good listen, and as with many of the GB SW stations, The Wizard likes to talk a bit in between the songs. I've listened on a few occasions now on 3947 kHz. he goes out live and gives out a phone number, so when you hear him asking you to call in, do it.

RADIO ARMADILLO

Believed to be a good friend of The Wizard, Armadillo was heard on 5.8 megs a few weeks ago and then... nothing! Word on the street is that a mosfet device in his modulator has blown up, putting him off the air, and that he has been unwilling or unable to rectify the problem. A huge campaign has been launched to facilitate the arrival of a replacement mosfet, and it is hoped that normal service will soon be resumed.

RADIO FREE ENTERPRISE / GROOVY GRANNY

Turns out these two stations are one and the same. Station operator calls himself Mr. R. F. Burns, likes to use R. Free Enterprise more for QSOs and testing purposes, and Groovy Granny for programme broadcasts. Although a recent arrival on the Short Wave scene, my enquiries have indicated to me that this guy has been involved in free radio for many years. We believe him to be an old East London boy who married and moved away ages ago, but not before having been involved in a groovy Medium Wave station in London as well as an excellent West London based FM station called RADIO ALPHA.

This station produced personalities like the unusual Gary Hughes and engineer / presenter Roger Barry, who is still very much in the circuit today if you know where to look for him! The Radio Alpha antenna was notorious for still being there and visible on the top of the towerblock for years and years after the station closed down. Mr. R. F. Burns' new SW service has been noted on 5835 and 6397 kHz this period.

UK RADIO

Not one of my favorite stations on the whole, but they are to be praised for getting the hours in. Bogus Jobseeker is on there sometimes, and he's good. The other day I heard them announce that they were on 99.3mHz, 1404 kHz MW, 6286kHz and 15080 kHz. Has anybody heard them on either MW or 15 megs?

RADIO PANDORA

Whenever I'm in the mood for chuckling on the radio, I always make sure that I tune to Radio Pandora, because Radio Pandora IS Europe's number 1 chuckling station!

Some things have instant appeal, this one took me a while, but now I like it very much. Steve StJohn was heard to interrupt the chuckling to say hello to me the other day, and that's much appreciated! Audio was a bit muffled a few weeks back, but things appear to be back to their normal high standard again now. Tends to be on quite early.

XENON TRANSMITTING COMPANY

A number of broadcasts have been heard from XTC this period on various frequencies in the 48 metre sub-band. This continues by all accounts to be one of the top rated UK AM stations which would not be seen dead operating on SSB. My only question is: Why couldn't I have been blessed with a voice like Tommy [Golden Tonsils] Teabags? Why?

RADIO STATION NAMES

My award for the best station name this period goes to the Dutch station 'Doctor Blow Radio', which I heard broadcasting on the rather difficult frequency of 1640 kHz. This channel is, of course, subject to problems from cordless phones on 1642 here in the UK, but the signal was cutting through quite well. Station Names are peculiar things aren't they? In a way you can argue that the station name does not matter that much, and that it is the station's overall performance and output that is important, but on the other hand, choosing a really catchy name at the outset can give the station a real boost. Then there's the question of what type of name you go for, and this will depend on the kind of image you want to create for the station. Do you choose the quirky, zany style of name like Radio Toodlepip, and risk not being taken seriously, or do you have Muff Murfin go to Dallas to produce you jingles like: "You're listening to Dirk Thrust, on Mega-Power FM" and risk sounding pretentious, or do you stick to something bland and neutral like WABC, and risk failing to have the desired impact? Some stations elect to use a name that has been used before, often because of the availability of a jingle package on some East Anglian Productions anorak CD, and my advice to those stations, which is said with no ill feelings or malice is not to go that route, come up with a new name, even if it means working without jingles for a while. On Radio Antares the name was chosen at short notice and with little thought. Antares was the brand name on a large 800 watt inverter which we used for our first ever test broadcast on 1350 kHz kHz back in November 1997. Antares is also the name of a star. It is interesting to note how many stations have an outer space connection, I wonder why that is. I don't consider the Antares name to be a brilliant one, but it has started to establish itself now.

Having said that, one of the beauties of free radio is that you do whatever you want, so if I decided to change it, I would! I would like to hear from you on this subject. How do you, [or would you, or DID you] choose a radio station name? If you were starting a new station now, what name would you choose, and how, if at all, would the name relate to the station's format? I would also like you to tell me, thinking back, of all the stations you have ever heard, what was the best, or most memorable name? To answer my own question, it is difficult to say which I would categorise as the best ever name. You have to separate the merits of the name standing alone, from how much you liked the station as a whole, but perhaps my nomination for a name that always sticks in my mind as catchy and appropriate would be the London FM pirate of a few years ago RADIO SHOESTRING. They had some great jingles as well, [made on a shoestring of course], which really gave the station a unique identity.

RADIO BORDERHUNTER

Good name, good station. Mr. B. has apparently been ill and in hospital for a while, but is now up and about and well again, and hunting across the borders of Europe with strong and clear signals as usual. Heard in recent weeks on 48 and 76 metres, and as I write this on a Tuesday evening, I've just heard him again on 3910kHz, followed by some SSB conversations between him and other operators on the same channel. He recently told me that he hopes to try 1.6 mHz at some stage, so listen out for that, but listen out for something else as well: Although from Belgium he speaks mostly in English [Good], but have you noticed the delightful faint growl, which stems from his accent, when he says the word 'Borderhunter'?.....Fantastic!

SUBTERRANEAN SOUNDS

A definite diversion from the norm, but captivating listening. Steve Midnight is one of the outstanding characters of the SW scene. He talks quite a lot, but unless you know his voice it may take a while to figure out that it is him, because he only IDs the station very very occasionally. The station has a mailing address, but that goes out once in a blue moon, and the telephone hotline is always open, but don't expect to be given that, only about three people in the whole world know it. I can already hear the cry from those of you who have been brought up on brainless banter DJ radio: "Oh my God! what on earth does he think of to say then?" I've told you, you morons! Things are moving on, and free radio is [sometimes] where progress takes place. Listen and learn!

PIRATE CONNECTION

The new edition of this publication from Sweden is now out, 1 1/2 years after the previous one. Whilst we all know that Stefan is a sweetie-pie, [Swedie-pie? ed] I think it would be fair to say that the unusual delay in printing this issue is the main cause of its appeal being slightly less than it might otherwise be. The phrase 'Water Under The Bridge' comes to mind! Best bit is the fine article by old Golden Tonsils of XTC. Stefan has promised to do better from now on, so that's OK, we forgive you... for now! Looking forward to the next issue, sunshine!

RADIO ANTARES

Some engineering work has already been carried out in conjunction with Argus in preparation for a possible regular service by us on SW. If Bert Bridges prints anything about Oscar's guide to lumberjacking technique, just ignore him by the way. Some initial low-power tests have already gone out, with pleasing results, so we may give it a go for a while and see how we like it. Activity on MW has been confined entirely to 1.6megs. Transmissions are averaging about one per week. We do try to do Sundays, but don't always make it, and some weekday evenings we do pop up. Frequencies are either 1650 or 1611kHz. We like this sub-band very much, and would like to see other British stations go there more often, as the car-sticker says: "1.6mhz listeners do it after dark", so this time of year, hours are restricted. The format continues to be speech priority programming. Intelligent radio for intelligent listeners, with free radio news and information often included. An encouraging level of listener response continues to come in by letter and telephone. We do reply to all letters, and the reply will include confirmation of a reception report if requested. We are DXer freindly. Our signal has been heard over a huge area, though chances are it won't be strong. Equip yourself with some suitable receiving apparatus, and a whole new dimension in listening opens up to you. I highly recommend loop antennas, mine brings up signals from an inaudible whisper to perfectly clear and readable. We may do a feature on loop antennas in the future. Derek Taylor may be able to advise further, but always send a s.a.e. Incidentally, in our local area we have people listening on deaf tranny radios, ghetto-blasters and such like, and they write in and phone us too!

SHORTWAVE PLANS BY THE ENGINEERING TEAM

We are now in a position to start **SHORTWAVE** services again. Now, to some of our staff and listeners, this may seem a retrograde step, after all, it wasn't so long ago, that we more or less dismissed SW as a load of bleeps and tweets, belonging to the 1920s and 30s, with only the Extra-Sad Anoracks bothering to tune in...

However, since late 1997, we started thinking more closely about SW, and realised that the potential coverage could gain us more listeners, not just the E.S.A.s.

It was the realisation that any 'Ghetto-blasters' type radio with SW as one of its bands could receive these 'Weaker-Than-World-Service' stations, that convinced us to have a go.

One idea that we came up with, involves the use of a 5 metre CB whip, with the loading coil ripped out, and four or five 5-metre wires, to make a scaled up version of an FM Ground-plane aerial, resonant on 20 meters, instead of the 3 metres used for FM. With a bit of fiddling, this should work in the 19metre band, where the Middlesborough station had been. Not only that, but by siting it on top of a block, the 'authorities' would think it was a CB aerial and leave it alone, and the signal would cover London by direct-wave! any sky-wave skip would thus be a bonus. This plan still exists today, and when the MUF gets there, we hope to try out 15,070khz, or thereabouts. U.K Radio is already on band, on 15060, and AMDS wants 15065. Any other stations looking at this band may be interested in 15010, 15015, 15020, 15025, 15030, 15035, 15040, 15045, 15050 and 15055... 10 possible 5khz channels, ALL MORE OR LESS CLEAR!

The old methods of using horizontal dipoles obviously do work, and will be followed on the lower bands. However we will not shut our eyes to ideas that 'conventional wisdom' says doesn't work. For example, our 6400 and 5835 broadcasts, following the raid, around Christmas and New Year 1997/1998 came from an aerial on a barn roof, less than a quarter wave high, and laying along the top. True, the signal could have been better, but nonetheless made it to Italy. This array meant the aerial could only be seen by someone actually looking for it, not by a casual glance. Since the New Year, the problem of finding a site has kept us off the air on SW since. Now we have a new plan.

ARGUS ANTARES

In cooperation with **RADIO ANTARES**, who have the engineering skills, the Argus rigs will be used from a site or sites to be found by either ourselves, or a third partner.

Radio Merlin International, if after July, and / or...

Laser Hot Hits [c], who are keen to go out on SW, are both 'in the frame' for this.

Radio Recharge International will of course be carried, in return for the rig and crystals Tim supplied, as promised. We have been putting Recharge out on our A.R.S.E. Dutch Band 1620/1650 broadcasts anyway, but once we get SW up and running, their programmes every once in a blue moon will present no problem for us.

Viewpoint International will be formed to carry a few hours of Roy Masters' broadcasts, for as long as the current site is in use. This will be continued from Antares' 1611/1650 broadcasts, onto the SW.

...A possible scenario could see Argus on air Saturdays, with Antares on Sundays, the other stations, Laser and/or Merlin, filling out the afternoons. If from the present site, 7-9pm is to be Viewpoint, a deliberately Anoracky name. 9pm Saturday and Radio Recharge is on, on a loop running to Sunday morning. From about 9am Sunday, it's the turn of Antares, to 7pm, then Viewpoint to 9pm, then either close or 'Afterburner, an up-tempo rock service provided by either Laser or Argus. If we go on weekdays, then Argus and Antares can alternate, and Viewpoint maintain its 7-9pm slot. Anyhow, that's one of the embryonic plans...

The frequency for all this is in the loglist as 5835khz, but even this may be changed, to get away from the massive signal on 5850. It is a good idea to stay above 5800khz, as not all domestic radios tune below there.

Oscar is also interested in the 6900-7000 khz area, and we have used 6400 in successful tests... Watch this space!

DJs wishing to appear on the SW service should let Bert know, as we will be drawing up rosters or rotas for these broadcasts.

Saturdays we hope to eventually get a live service running, with live MW following on Sundays, when Antares will be on on SW.

DXERS. THE LAST WORD [I HOPE!] by Bert Bridges

I didn't receive Kai's 'Interference' magazine no 1, when it first came out, Doug sent me a copy later on, but I knew about one small part of it, when Derek Taylor was on the phone, going ballistic. He later faxed me the offending article, in which the editor said that 'DXers are all mad [hi]'. This got us thinking a bit, and the result was the article 'How to piss off a DXer', in which we attempted to explain the different sorts of letter a station can receive, and how the station should react to those letters.

How a reception report can be wrapped up in a freindly letter, and still come across better than the stilted standard DX letter, while conveying the same [or better] details about the signal and programming heard.

If there is one thing that pisses off a station that has made the effort and run the risk of getting on the air, it is a list of tracks, times they were heard etc., which tells the station one thing, and one thing only... Not that the DXer was really listening to the station, [They already KNOW what tracks they played, for f@#^s sake!] BUT THAT HE ONLY BOTHERED TO LISTEN FOR A FEW MINUTES!!! And then he has the nerve to ask for verification! P\$EE OFF!

The problem as I see it, is that DXers like that have little or no knowledge of belonging to a free station, and don't see that such reports, while fine if to a licenced station, is an insult to the efforts and risks run by a free station.

Anyway, in 'Put Roger Inside Me' - or PRIM [nice one Derek!] 'Rubber' Jonny A(...)n tried to justify such behaviour in a ridiculous item 'How to piss off an operator' This convinced no one, and, I am therefore going to try and help some confused folk out...

The Article, 'How to identify a DXer' was my response to Rubber Jonny, it aimed to show that not all DXers are a waste of time, some are very helpful indeed, [and to slim down the loglists with a few deflated egos not sending in reports!]

The article listed different sorts of DXers, and has had a rather funny outcome, with at least five DXers confused as to their identity!

HERE'S a self-test, for all DXers to take.

[TO AVOID FURTHER CONFUSION, NON-DXERS, PLEASE DO NOT BOTHER!]

1 FOR HOW LONG DO YOU LISTEN TO A FREE RADIO STATION?

[60mins plus] Good Ole Boy, Damned Nuisance [less than 60mins] All other types

2 DO YOU LISTEN BECAUSE YOU ENJOY THE MUSIC/PROGRAMMES?

[YES] Good Ole Boy [NO] All other types

3 DO YOU ONLY LISTEN FOR QSLs?

[YES] Twat, Damned Nuisance, Blabbermouth [NO] Good Ole Boy, Sneak

4 HAVE YOU EVER REQUESTED A QSL?

[YES] All types but Sneak [NO] Sneak -go to question 6

5 IF YOU DIDN'T GET A QSL, DID YOU EVER REPEAT YOUR REQUEST?

[once] Good Ole Boy [2-5 times] Twat, Blabbermouth [over 5 times] Damned Nuisance

6 IF YOU SEND IN YOUR REPORTS TO RADIO PUBLICATIONS ETC., IS IT...

A [TO GET MORE PEOPLE TUNING INTO A STATION YOU ENJOY] Good Ole Boy
B [TO SCORE POINTS OFF OTHER DXERS] Twat, Blabbermouth, Damned Nuisance.
C [TO GET YOUR NAME INTO AS MANY PUBLICATIONS ETC, AS POSSIBLE] as B, +Sneak

7 IF YOU SEND IN THESE REPORTS TO ALL THESE PUBLICATIONS ETC, DO YOU TELL THE STATIONS YOU ARE DOING SO?

[YES, ALL TIMES] Good Ole Boy, Damned Nuisance
[SOME TIMES, IF I CAN AFFORD POSTAGE] Good Ole Boy, Twat, Blabbermouth
[NO] Sneak

HOPEFULLY THIS WILL SORT THINGS OUT ONCE AND FOR ALL, AND THIS SILLY SUBJECT CAN BE DROPPED. IT NOT ONLY WINDS UP THE GENUINE DXERS, BUT PISSES OF THE NORMAL LISTENERS AND READERS.

BY THE WAY... A man walks into a Doctors surgery. He has a cucumber up his nose, a carrot in his left ear, and a banana in his right ear.
"What's the matter with me, doctor?" he asks.
"you're not eating properly." replies the doctor.
